

Entrepreneurship the focus at Invention to Venture™ workshop

The Ohio State University

In December 2006, the Nanoscale Science and Engineering Center at Ohio State hosted “Invention to Venture: Bringing Technology to Market,” a workshop designed to teach graduate students about the process of taking a research-based product from the university laboratory to the commercial market. Approximately 30 students listened as Jean Schelhorn from the OSU Technology Licensing office explained the technology transfer process and biomedical device entrepreneurs Dr. Wayne Poll and Paul Geary (pictured, right) discussed their industry experiences. Students were then given an opportunity to pose questions to a panel that included the speakers and Prof. Michael Camp, Director of OSU’s Center for Entrepreneurship.
